Below are the results from the Hall A NaI detector survey located in the left spectrometer hut. The coordinate system was established off the top face of the VDC chamber and then pitched 45 degrees to follow the detector stack. The four fiducial points on the VDC were used to center the coordinate system in the X and Y direction. The Z direction is centered on the top face of the VDC chamber. The values from both the original coordinate system normal to the VDC top surface and the rotated system are listed. A +X is to the beam left, a +Y is up, and a +Z is downstream. Values are in millimeters.
